

Sprint 2:

The data extracted is cleaned by replacing the null values with certain values

The relationships between the data is explored . Across all values of **Hospital_region_code**, the sum of **Admission_Deposit** is over 667 million.

For **Admission_Deposit**, the most significant values of **Hospital_region_code** are X and Y, whose respective **Admission_Deposit** values add up to almost 530 million, or 79.4 % of the total.
